Professional Summary

Full Stack Developer in the making with hands-on experience in React, Node.js, Express, and MySQL. Passionate about building scalable, user-focused web applications backed by clean REST APIs and well-modeled relational data. Strong programming foundations in JavaScript, Python, and Java, with additional experience integrating real-time data pipelines from IoT projects. Eager to contribute to a fast-moving engineering team and deliver production-ready features end-to-end.

Technical Skills

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design
Backend: Node.js, Express.js, REST API design, JWT Authentication
Databases: MySQL, PostgreSQL, SQL query optimization, Schema design
Languages: JavaScript, Python, Java, C
Tools & Platforms: Git, GitHub, Postman, VS Code, npm, Arduino IDE
Concepts: Data Structures, OOP, MVC architecture, Agile, Problem Solving
Other: IoT (ESP8266, sensor integration), ThingSpeak Cloud, MATLAB

Projects

TaskFlow — Full Stack Productivity & Team Collaboration App

🐙 [/Sujith3917/taskflow](https://github.com/Sujith3917/taskflow)

React, Node.js, Express, MySQL, JWT

In Progress

- Building a full-stack web application that lets users create projects, assign tasks to team members, track deadlines, and visualize progress through a Kanban-style dashboard.
- Designed a normalized MySQL schema with users, projects, tasks, and assignments; implemented role-based access (admin / member) using JWT authentication and bcrypt-hashed passwords.
- Developed 15+ RESTful API endpoints in Express.js for CRUD operations, filtering, and aggregation; tested all endpoints with Postman before frontend integration.
- Built a responsive React frontend with reusable components, drag-and-drop task cards, and real-time status updates using React hooks and the Context API.
- Version-controlled the project on GitHub with feature branches and meaningful commits to mirror an industry workflow.

Voice-Activated Personal Assistant

Python, Raspberry Pi 4

- Engineered a Python-based voice assistant capable of handling 10+ command categories including schedule management, language translation, news updates, dictionary lookups, and interactive quizzes.
- Integrated speech recognition (Google Speech API) and text-to-speech (pyttsx3) on Raspberry Pi 4 hardware to deliver hands-free, conversational interaction with sub-2-second response time on local commands.
- Designed modular Python code so new skills can be added as plug-in functions, demonstrating clean separation of concerns.

Real-Time Water Quality Monitoring System (IoT)

ESP8266, Arduino IDE, ThingSpeak, SQL

- Built an end-to-end IoT solution that continuously streams 4 water quality parameters (pH, turbidity, temperature, flow rate) from sensors to a cloud dashboard for remote monitoring.
- Programmed ESP8266 NodeMCU in Arduino IDE to read sensor data every 15 seconds and transmit securely to ThingSpeak over Wi-Fi.
- Developed a web dashboard with threshold-based alerting so users are notified the moment any parameter crosses safe limits, enabling early detection of contamination.
- Stored historical readings in SQL for trend analysis; results published in ICAECT 2024 Conference (CRC Press).

Education

Sri Ramakrishna Engineering College

Coimbatore, India

B.E. Electronics and Communication Engineering — CGPA: 7.76 / 10

Oct 2022 – Jun 2026

- Relevant Coursework:** Data Structures, Object-Oriented Programming, Database Management Systems, Computer Networks, Operating Systems.

Certifications

- Python for Beginners — Infosys Springboard
- Java Certification — GeeksforGeeks
- Data Structures in C — Great Learning

Publications & Achievements

- Published research paper at **ICAECT 2024 Conference (CRC Press)** on IoT-based water quality monitoring.
- Recipient of the **Mini Project Excellence Award** for outstanding hardware-software integration.
- Participated in SRISHTI 2024 (Saintgits College of Engineering) and SREC INNOVATE technical symposiums.
